T 00-01 Brush holder

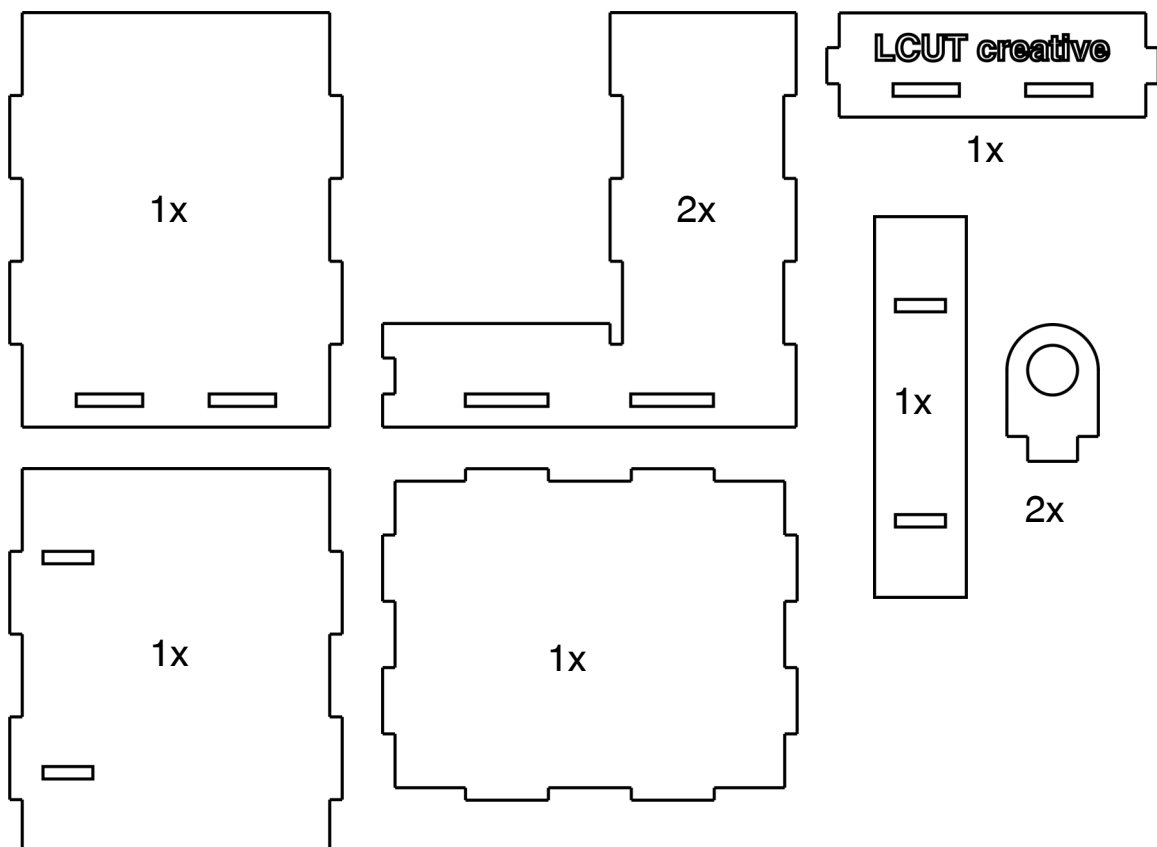

**All drawings are not in scale.
Some proportions on drawings may differ from reality.**

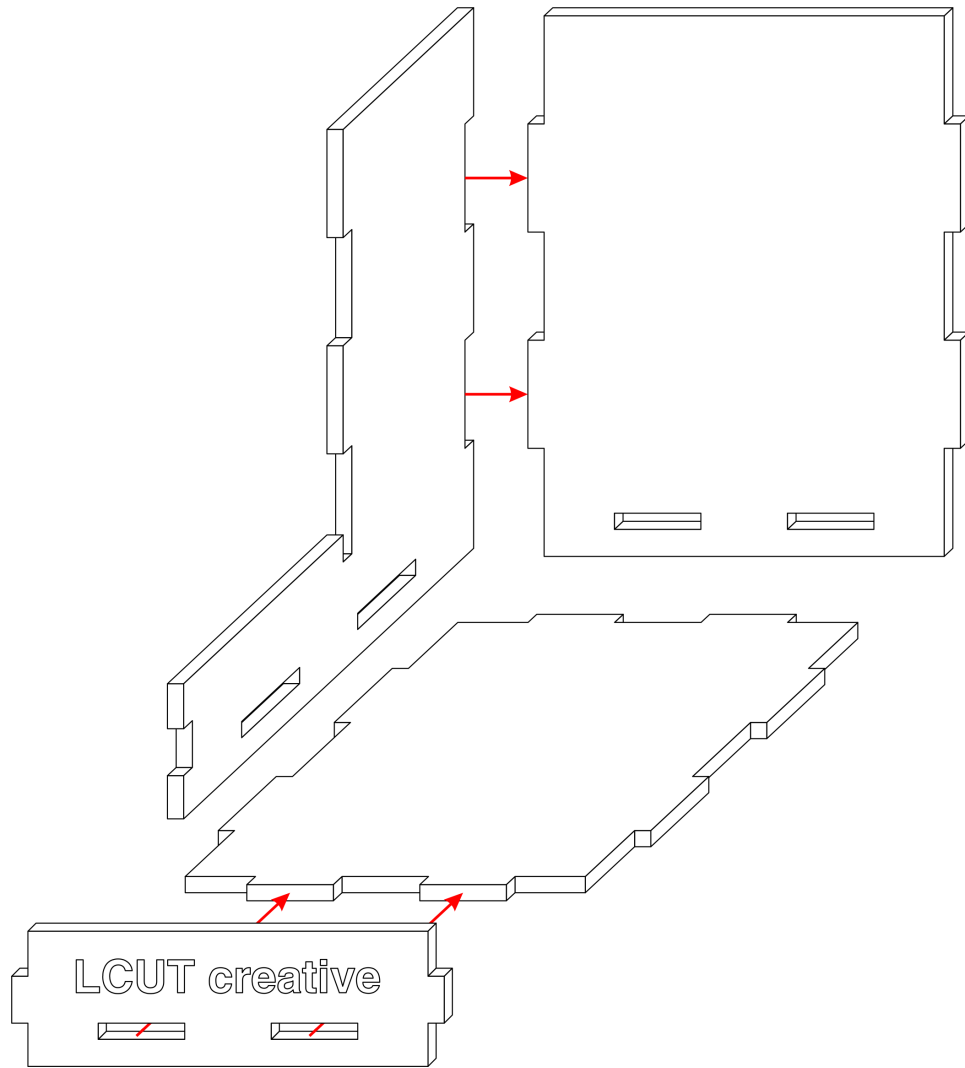

Width: 80mm Depth: 100mm Height: 100mm

! We recommend using good quality, strong, wood glue to assemble this product. It is recommend to sand all of the plywood parts before assembly. If desired the product can be painted with any wood compatible paint or varnish.

We very strongly recommend use of clamps to hold the parts while glue dries

Parts:

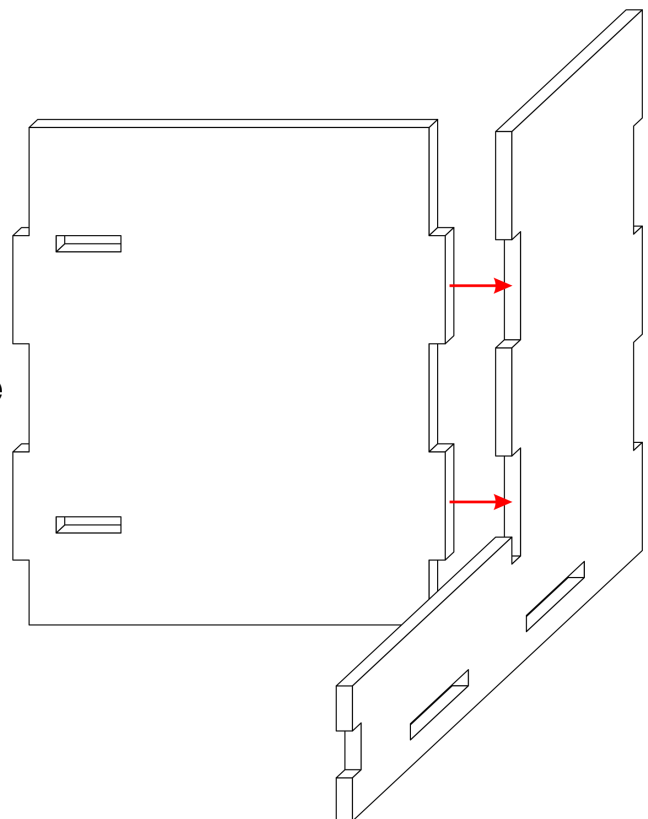

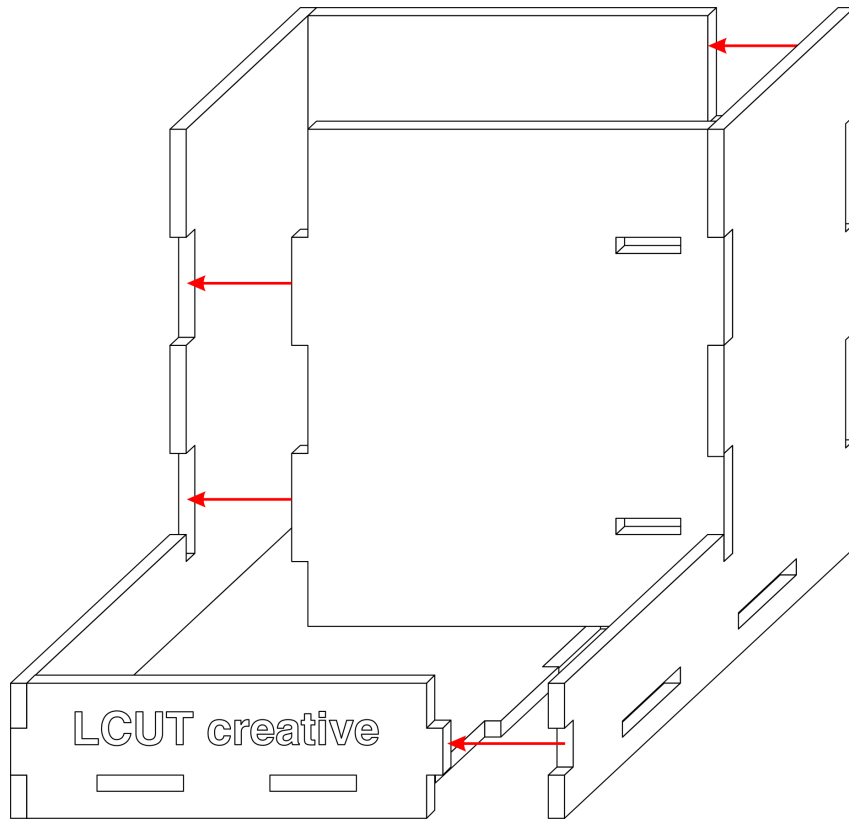

Start by joining the floor, front element, one side element, and back element together. Clamp and leave to dry.

Join one side and the middle divider together. The divider can be glued with the slots on either left or right side (left side show).

Clamp and leave to dry.

Join the 2 assemblies from previous page together. Clamp and leave to dry.

Finally glue the brush eyes into the support element. Before glue dries slot the assembly into the divider. The top of the support element should be flush with the top of the divider. Dry fit before gluing together if needed.
